Description

Experience has shown that the kiln chain area the actual temperatures are approx. 100-150°C (212-302°F) lower than in the kiln centre, therefore, a lower heat resisting grade for shackles and hangers is recommended and more cost effective.

{tab=Advantages}

- Reduces dust generation by up to 50% over common sizes of round link chain
- Twice the surface area per link compared to 3/4" x 3" roundlink chain
- Half the required links means reduced installation Cost
- Proprietary Alloys for optimized chain link life
- Often less than 12 month Return-On-Investment
